HOW TO SELECT STRIP BLOCKS FOR MODELS 2700-05 & 2745-05

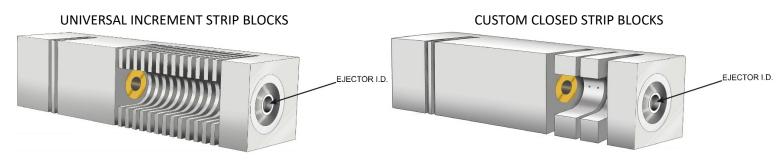

WHAT IS A STRIP BLOCK?

The Strip Block holds the strip blades and produces the desired strip lengths on the 2700-05. It is located on the Cutter Head of the 2700 stripper.

FOLLOW 3 EASY STEPS ON HOW TO SELECT STRIP BLOCKS

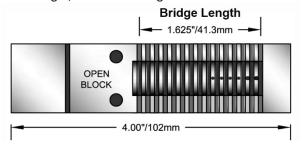

STEP 1: SELECT THE TYPE OF BLOCK, UNIVERSAL INCREMENT OR CUSTOM CLOSED.

UNIVERSAL INCREMENT STRIP BLOCKS

Universal Increment Strip Blocks are mainly for high-mix, low-volume applications. These blocks allow for a variety of strip lengths by simply placing your strip blades in different increment slots. For example, a 1/8" increment strip block can produce any strip combination divisible by 1/8"; such as 1/4" x 1/2", 3/4" x 3/8" or 1" x 1".

Universal Strip Blocks come with short bridge lengths that require less wire guiding. These are ideal for short strip lengths under 1". For strip lengths, 1" and longer, select a full-length increment block.

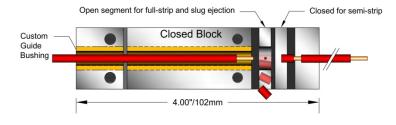

Universal Increment Strip Blocks require bridge guides for proper guiding of the wire through the block. (See page 4 for more details)

CUSTOM CLOSED STRIP BLOCK

Custom Closed Strip Blocks are for high volume or high-precision stripping applications. Closed blocks are precisely hand machined to the customer's specification. Closed blocks allow for operating the stripper at a faster speed, thus increasing production. Typically, the blade mounting slots on custom blocks are double-wide. The wider slots are to accommodate both strip blades and guide sets in the same slot. Setups are quicker on closed blocks, and there is no need for bridge guides as they come with a built-in internal guide bushing.

Strip blocks can be specified for a full-strip or semi-strip, or a combination of both. A sample is in the illustration below.

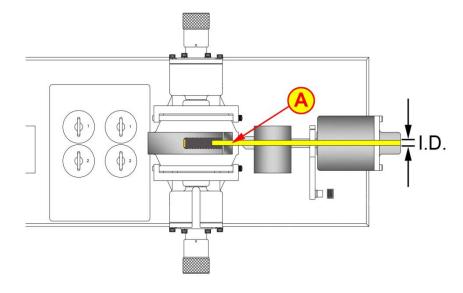

The standard block includes a single strip combination. Up to a maximum of 3 strip combinations can be added at an additional cost for each.

STEP 2: SELECT THE EJECTOR I.D.

When selecting the block Ejector I.D., this is primarily based on the nominal range of the wire. See tables for the best ejector diameter based on wire AWG size range.

A: The strip block ejector may be equal or smaller in I.D. size, but not be greater than the I.D. of the right strip assembly on the machine. Additional size right strip assemblies or modification kits may be required.

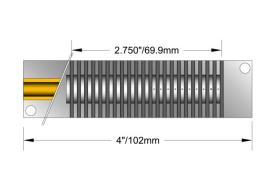

STEP 3: USE THE TABLES BELOW TO CROSS REFRENCE FOR BLOCK PART NUMBER.

		- 1.625"/41.3mm
	OPEN BLOCK	
-	4	.00"/102mm —

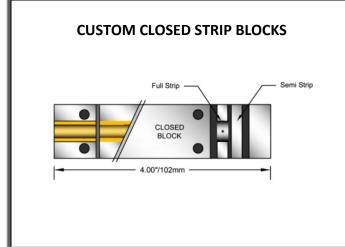

UNIVERSAL INCREMENT SHORT STRIP LENGTH BLOCKS

		NONE STRIP BLOCK PART NUMBER	
	EJECTOR I. D. SIZE Ejector I.D	15056 (For 2 Parallel Conductor Slitts)	13845 (For 3 Parallel Conductor Slitts)

Bridge Guides for Universal Open Increment Strip Blocks

Bridge Guides are required when working with open universal increment strip blocks. The guides are for guiding smaller wires ranging from 32 to 12 AWG. The guides sustain and control wires with high-memory curve and help guide them across the strip block bridge. Without Bridge guides, high-memory curved wires can work their way out of the strip block's thus creating a wire jam. For the best setup, create a guide funnel using the closest Bridge guide to the wire O.D. on the far right, and use any larger guides on the left side. See sample illustration below.
